Unit 2: Teamwork and infractions

Keywords:

F1 sounds and noise

ear: the motors(engine) and wheels & pit-stop, pit-stop lane

re-fuel the carburant, filling the tank.

Teamwork = necessary to be fast

race to be as fast as possible

mechanic teams working on the cars it's a crew

a wheel gun

check air pressure inside the tyre

fuel hose

jack = lift up the cars

walkie-talkie

Comparison of the two videos:

The wheels, the equipment, the time, the number of people

In 1950 only one person changing the wheels they take like 2 minutes whereas, in 2013 4 teammates for changing the wheels they take like 5 seconds

As a consequence, in 2013 the pit-stop it's way shorter than the one in 1950.

Therefore, they win time for the race, teamwork's is essential to win the race,

In addition: on the one hand the mechanics used a sledgehammer in 1950, on the other hands they used wheel guns in 2013.

For their safety, mechanics wear helmets, gloves and a suit.

I think for me, to my mind, as far as I'm concerned.

To me mechanics today it's look like a very stressful job, and a fast-to-fast job they are really fast and really important for the racer and need to be careful for the security of everyone.
